

5.1.1 Simpulan

Berdasarkan hasil dan pembahasan maka dapat diambil simpulan sebagai berikut:

1. Rendemen metil ester optimum dari minyak biji feun kase (*Thevetia peruviana*) diperoleh menggunakan katalis NaOH dengan konsentrasi 1,00% w/w yaitu sebesar 81,48%. Penelitian menemukan bahwa konsentrasi katalis NaOH yang berlebih dapat menyebabkan pembentukan emulsi dan sabun sehingga menurunkan rendemen biodiesel.
2. Hasil uji parameter biodiesel meliputi densitas, viskositas, bilangan asam, perhitungan % ALB, bilangan penyabunan dan uji titik kabut biodiesel yang diperoleh dalam penelitian ini dengan variasi konsentrasi katalis NaOH 0,50%, 0,75%, 1,00%, dan 2,00% w/w antara lain, $812\text{--}851 \text{ gr/cm}^3$, $4,31\text{--}5,26 \text{ cSt}$, $2,38\text{--}3,07 \text{ mg KOH/gr}$, $1,16\%\text{--}1,90\%$, $155,71\text{--}155,71 \text{ mg KOH/gr}$ dan 6°C . Nilai yang telah memenuhi karakteristik sebagai mana Standar Nasional Indonesia (SNI 7182:2015) yaitu nilai densitas dari konsentrasi katalis NaOH 1,00% yaitu 851 kg/m^3 serta nilai viskositas dan titik kabut dari semua variasi konsentrasi NaOH. Biodiesel minyak biji feun kase memiliki nilai bilangan asam yang tinggi. Hasil perhitungan % ALB dan bilangan penyabunan masing-masing konsentrasi katalis NaOH belum sesuai dengan syarat mutu biodiesel. Titik nyala biodiesel dari minyak biji feun kase sebesar 165°C telah memenuhi standar sifat fisis biodiesel menurut SNI.
3. Karakterisasi gugus fungsi metil ester dari minyak biji feun kase dengan uji FTIR (*Fourier Transform Infrared*) membuktikan bahwa reaksi transesterifikasi telah menghasilkan biodiesel, yang dapat dibuktikan dengan serapan khas metil ester ($\text{O}-\text{CH}_3$) pada bilangan gelombang $1170,79 \text{ cm}^{-1}$, 1436 cm^{-1} dan 1195 cm^{-1} . Puncak-puncak serapan metil ester dari minyak feun kase dibandingkan dan memiliki kemiripan dengan puncak-puncak serapan metil ester dari minyak bunga matahari, minyak jarak pagar, minyak goreng bekas dan minyak *Thevetia peruviana* pada penelitian sebelumnya.

5.2 Saran

Adapun saran bagi peneliti selanjutnya yang tertarik melakukan penelitian serupa yaitu:

1. Sifat fisis biodiesel minyak biji feun kase telah memenuhi kriteria standar mutu biodiesel (SNI 7182:2015), namun kadar asam lemak bebas dalam metil ester masih tinggi. Sehingga, perlu perlakuan awal (*pretreatment*) terhadap minyak biji feun kase untuk menurunkan asam lemak bebas (ALB) dengan menggunakan reaksi esterifikasi metanol dengan katalisator asam.
2. Analisis metil ester feun kase dengan instrumen GC–MS atau HPLC perlu dilakukan untuk mengetahui jenis metil ester yang terkandung dalam biodiesel yang dihasilkan.

DAFTAR RIWAYAT HIDUP

Penulis dengan nama lengkap Maria Lilita Guterres yang akrab dipanggil Lili, lahir di Maubesi Propinsi Nusa Tenggara Timur pada tanggal 10 September 1999. Penulis merupakan anak pertama dari empat bersaudara dari pasangan Bapak Constantino Guterres dan Ibunda Paularita Bernadeta Tae. Penulis lulus dari TK Dharma Wanita Kefamenanu pada tahun 2005 dan mengikuti pendidikan tingkat sekolah dasar di SD Negeri Maol kefamenanu, tamat dan berijazah pada tahun 2011. Penulis melanjutkan pendidikan ke SMPS Katolik Aurora dan lulus tahun 2014. Kemudian melanjutkan pendidikan ke SMA Negeri 1 Kefamenanu dan lulus pada tahun 2017. Penulis memilih melanjutkan kuliah di Program Studi Kimia Fakultas Pertanian (FAPERTA) Universitas Timor-TTU lewat jalur SNMPTN. Selama kuliah, pernah menjadi asisten dosen praktikum kimia organik pada tahun 2019 sampai 2021. Penulis juga menjadi asisten untuk praktikum kimia dasar, kimia anorganis, dan kimia fisik. Penulis aktif dalam kegiatan HMP kmia dan menjabat sebagai ketua bidang penalaran dan keilmuan dalam periode 2017 sampai 2019. Hingga selesainya penyusunan skripsi ini, penulis memiliki moto “Belajar dengan hati, bekerja dengan semangat”.
